

The evolution of bicycle mobility in France

Francis Papon
22 septembre 2016

IFSTTAR

Data sources

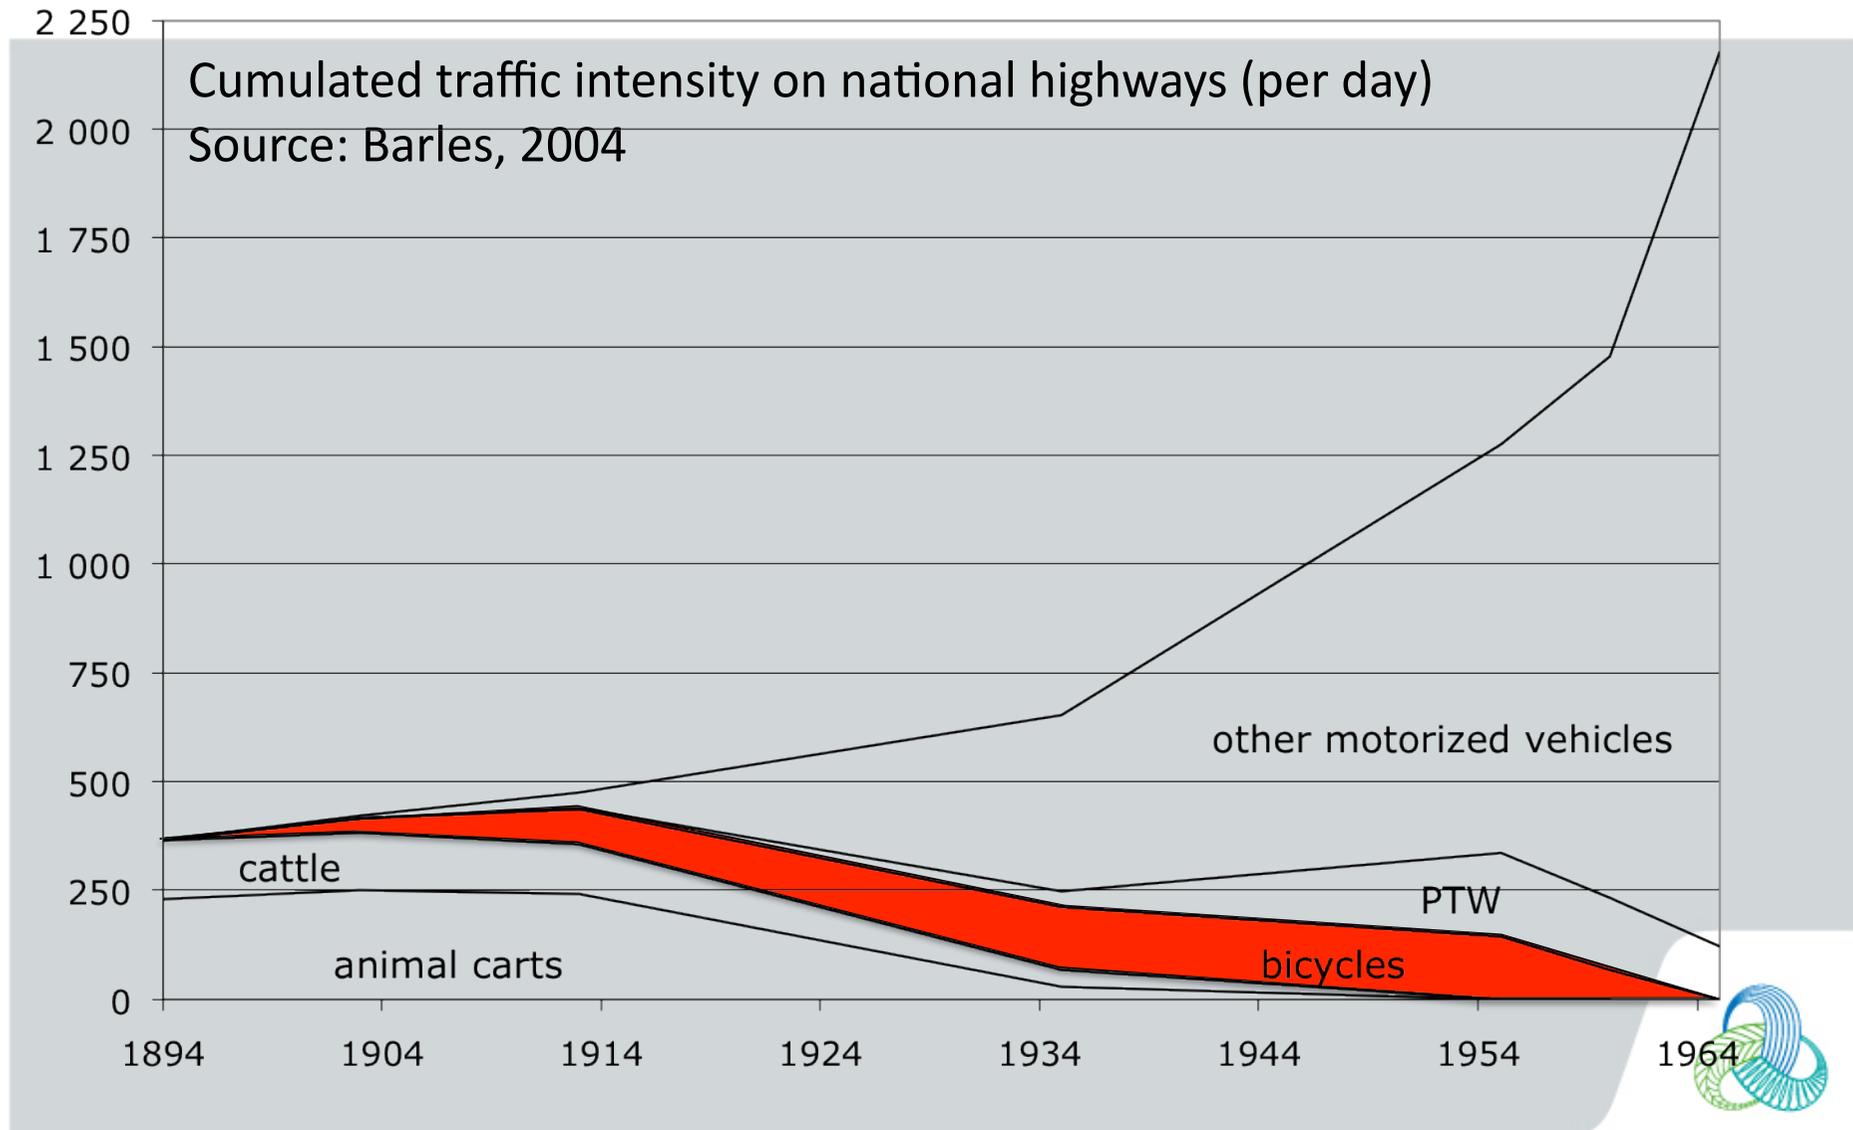

- **Sales:** *Chambre syndicale* then CNPC since 1890
- **Fleet:** *Impôt sur les vélocipèdes* 1893 to 1959,
National Travel Surveys: 1966 to 2008
- **Traffic:** national highways 1903 to 1960, Paris since 1997
- **Accidents:** ONISR since 1982
- **Trips and modal share:** national and local travel surveys in urban areas since 1976

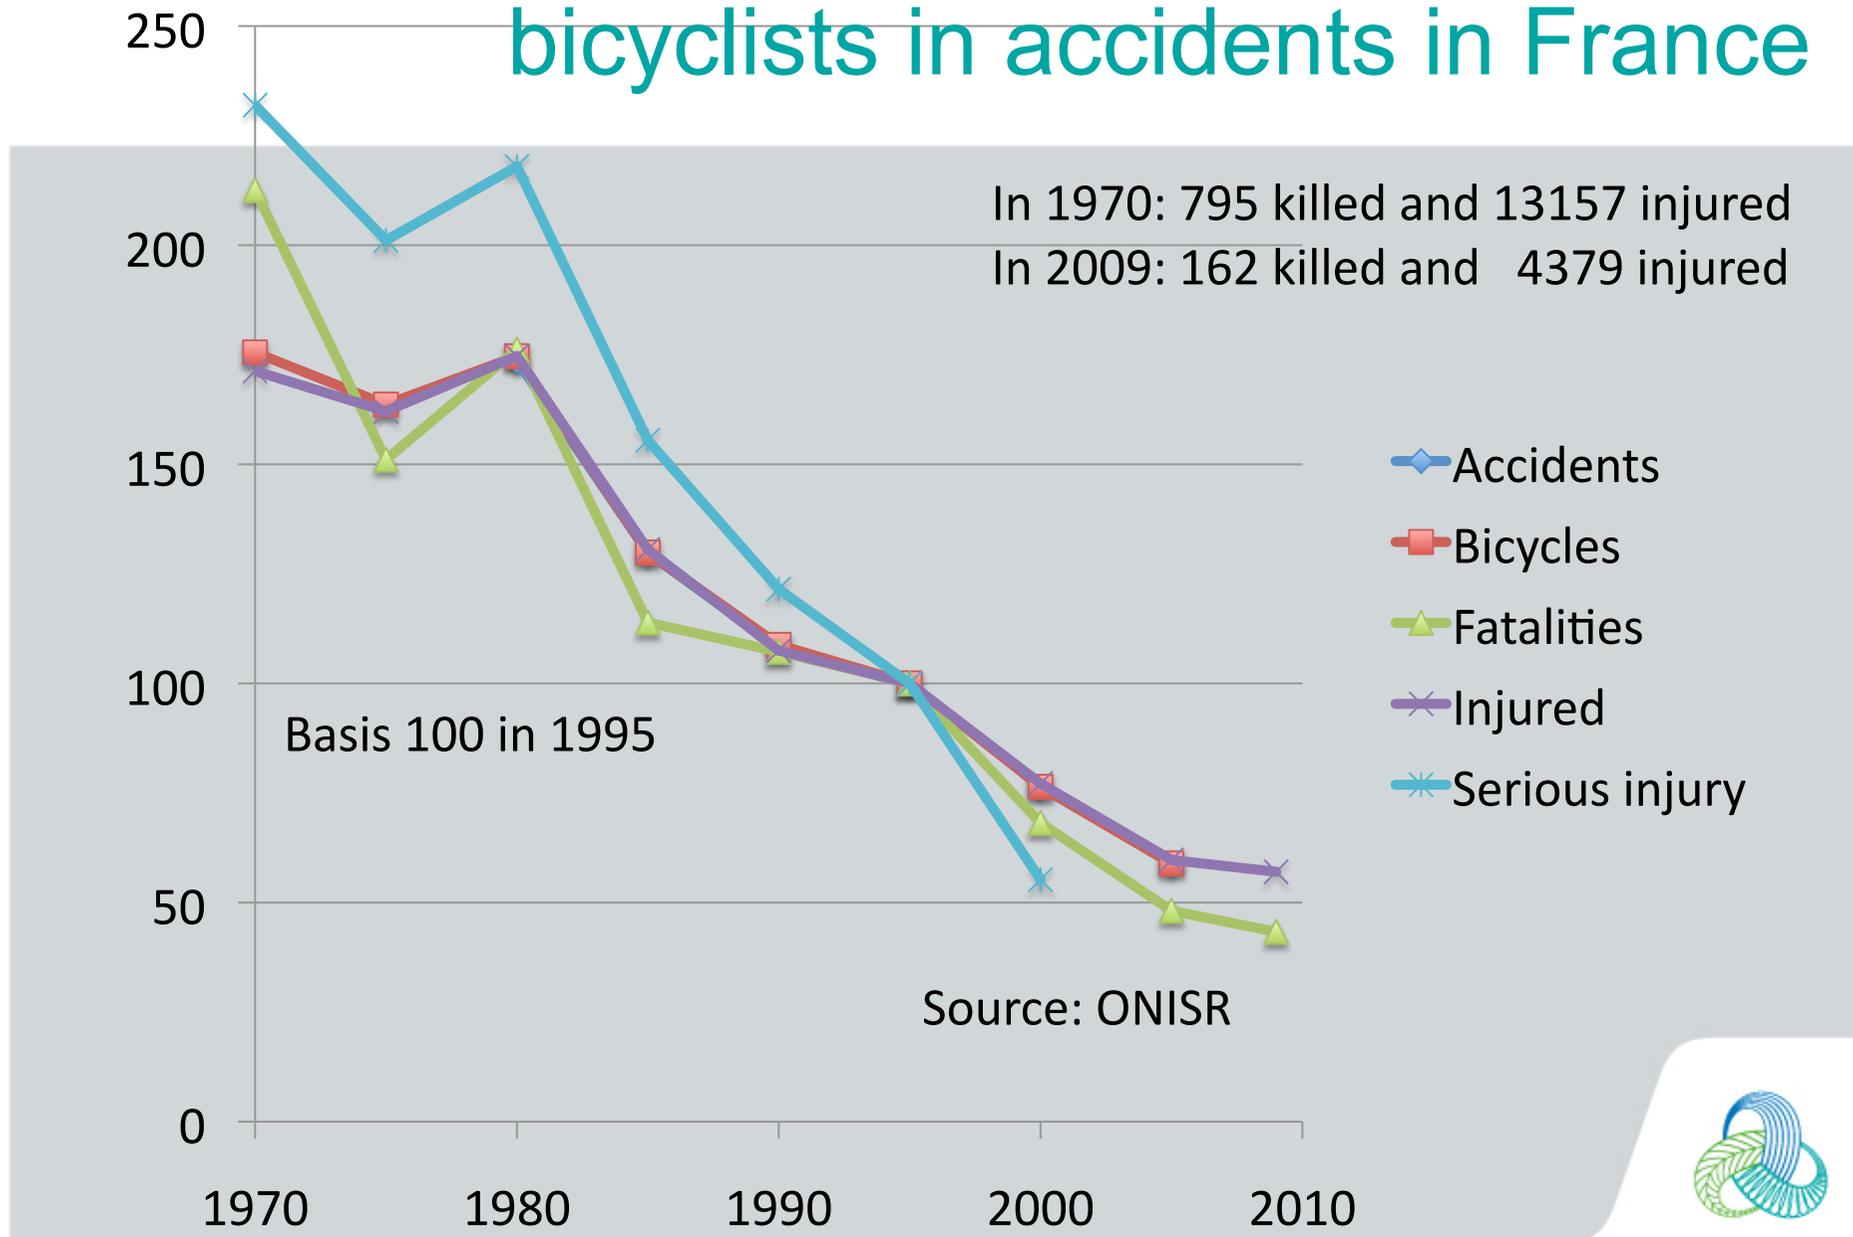

French bicycle market 1992-2006

	Sales	French supply	Imports	Exports
1992	2 878 528	728 035	2 150 493	307 279
1993	3 199 100	667 600	2 531 500	275 600
1994	2 935 569	873 850	2 061 719	400 720
1995	2 870 000	1 040 000	1 830 000	381 150
1996	2 351 026	992 160	1 358 866	342 000
1997	2 242 900	1 092 900	1 150 000	239 400
1998 (*)	2 435 000	1 300 000	1 135 000	206 000
1999 (*)	2 584 000	1 334 000	1 250 000	270 000
2000 (*)	2 690 000	1 580 000	1 110 000	330 000
2001 (*)	2 290 000	1 273 000	1 017 000	
2002 (*)	2 422 000	1 228 000	1 194 000	Source: FIEV
2003 (*)	2 747 000	1 242 000	1 505 000	
2004 (*)	3 087 000	1 375 000	1 712 000	
2005 (*)	3 702 200	1 238 200	2 464 000	
2006 (*)	3 250 000	1 060 000	2 190 000	

Bicycle traffic peaked 1935-1955 on French highways

A decreasing involvement of bicyclists in accidents in France

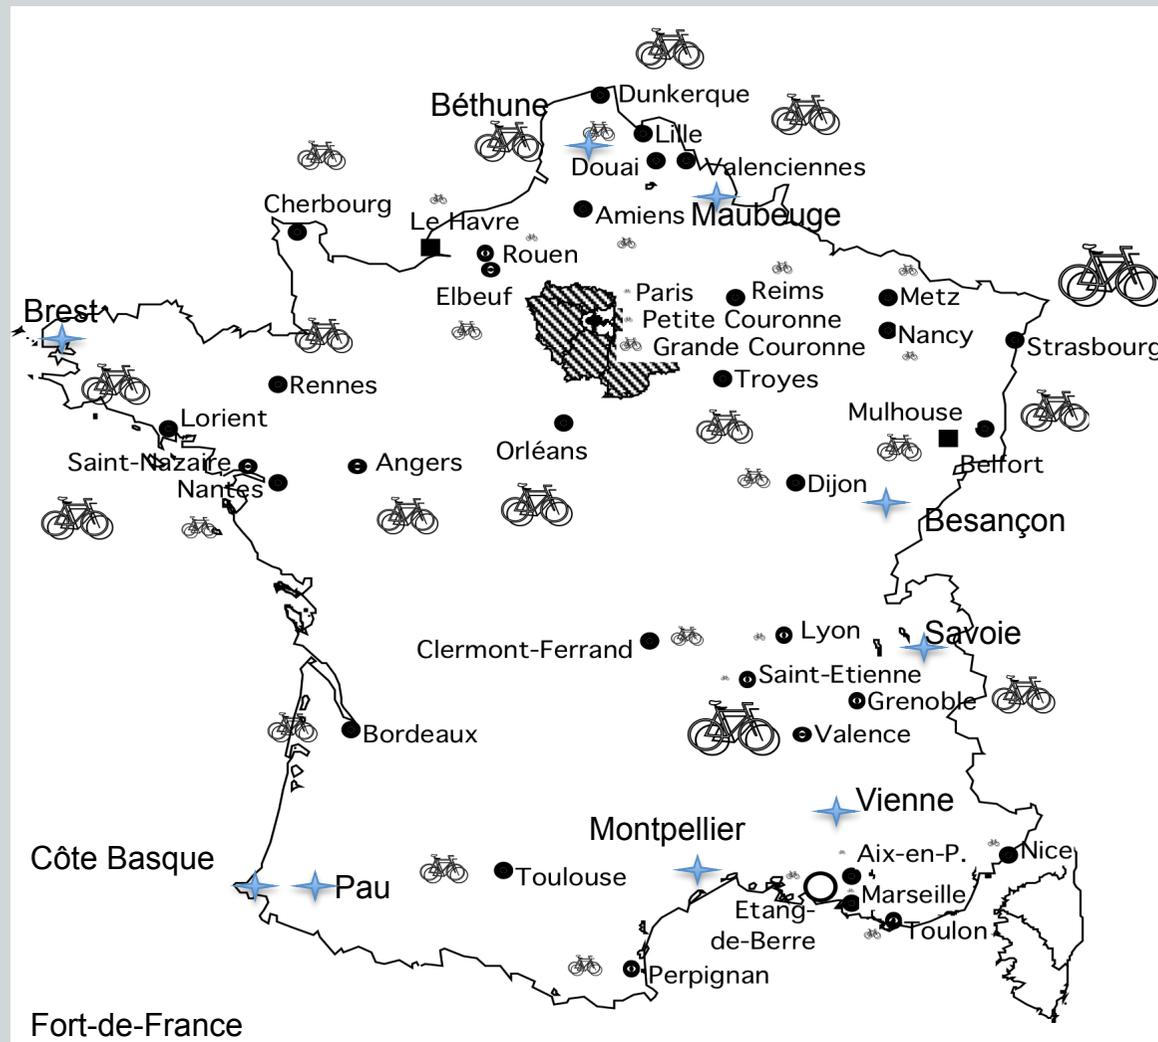

Travel surveys in France

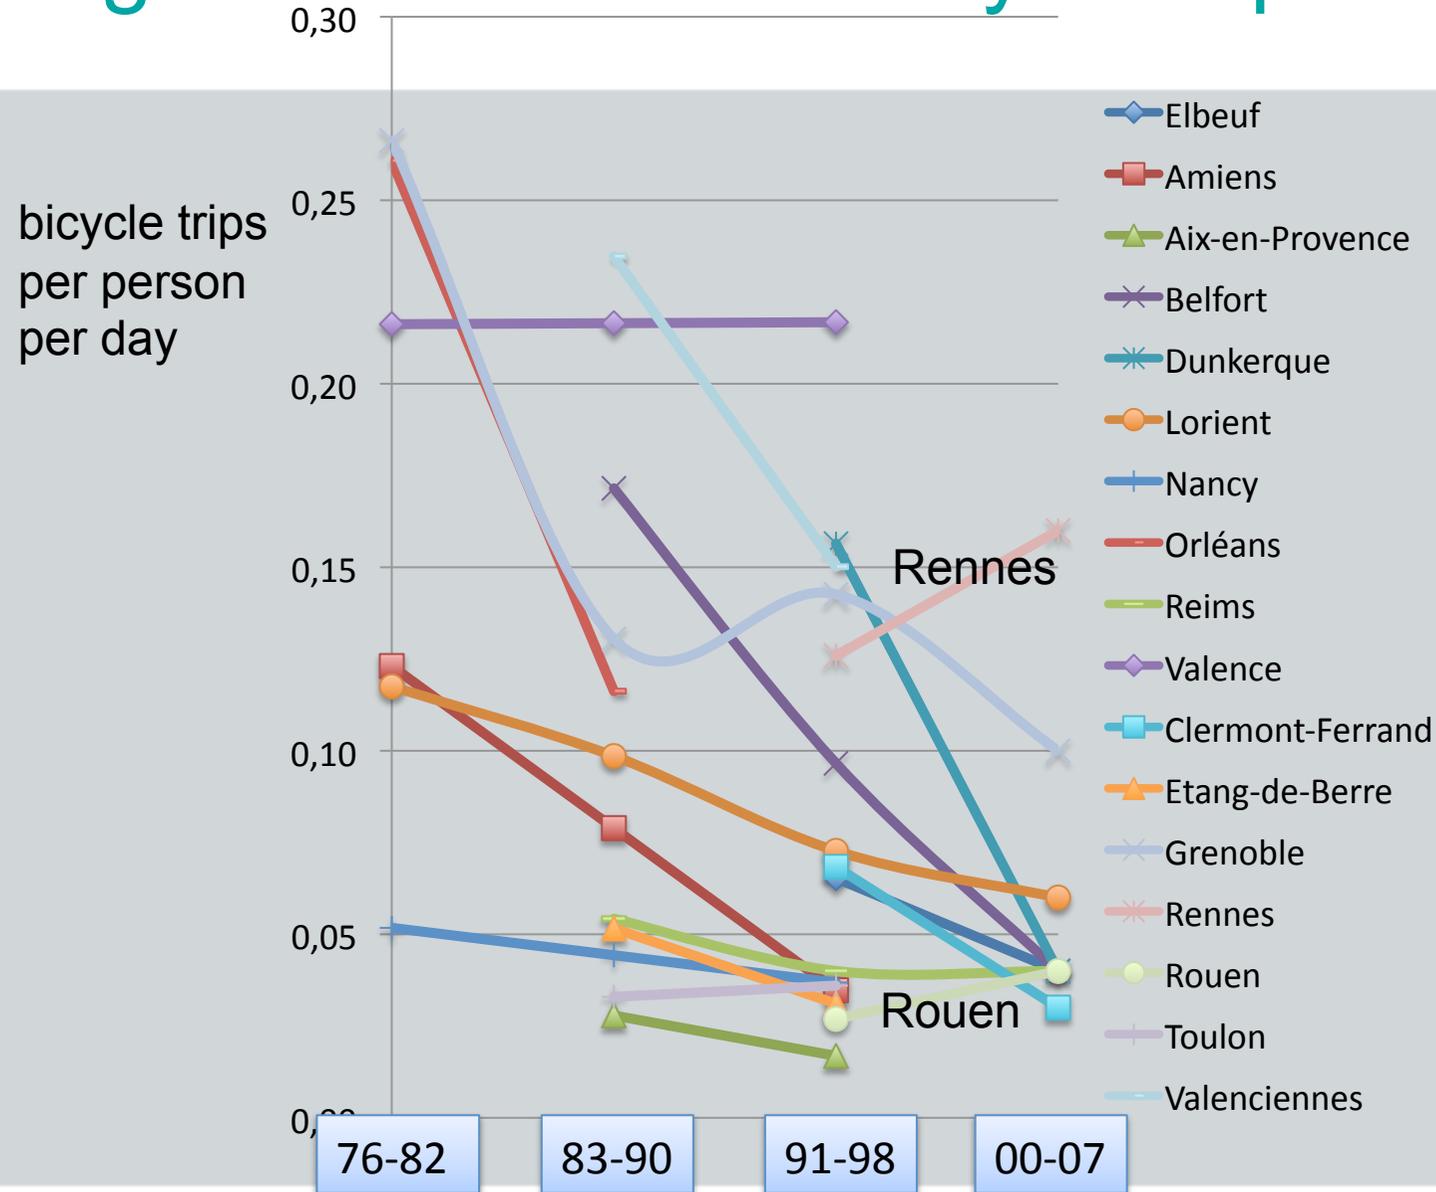

- Over 100 surveys in **French cities** from 1966 to present (Certu, Dreia) but bicycles only since 1976
- **5 National Travel Surveys:** 1966-67, 1973-74, 1981-82, 1993-94, 2007-08 (Insee, Soes, Inrets)
home to work trips 1959
- Old surveys only known from publications

Local travel surveys 1976-1998 and ★ 1999-2007

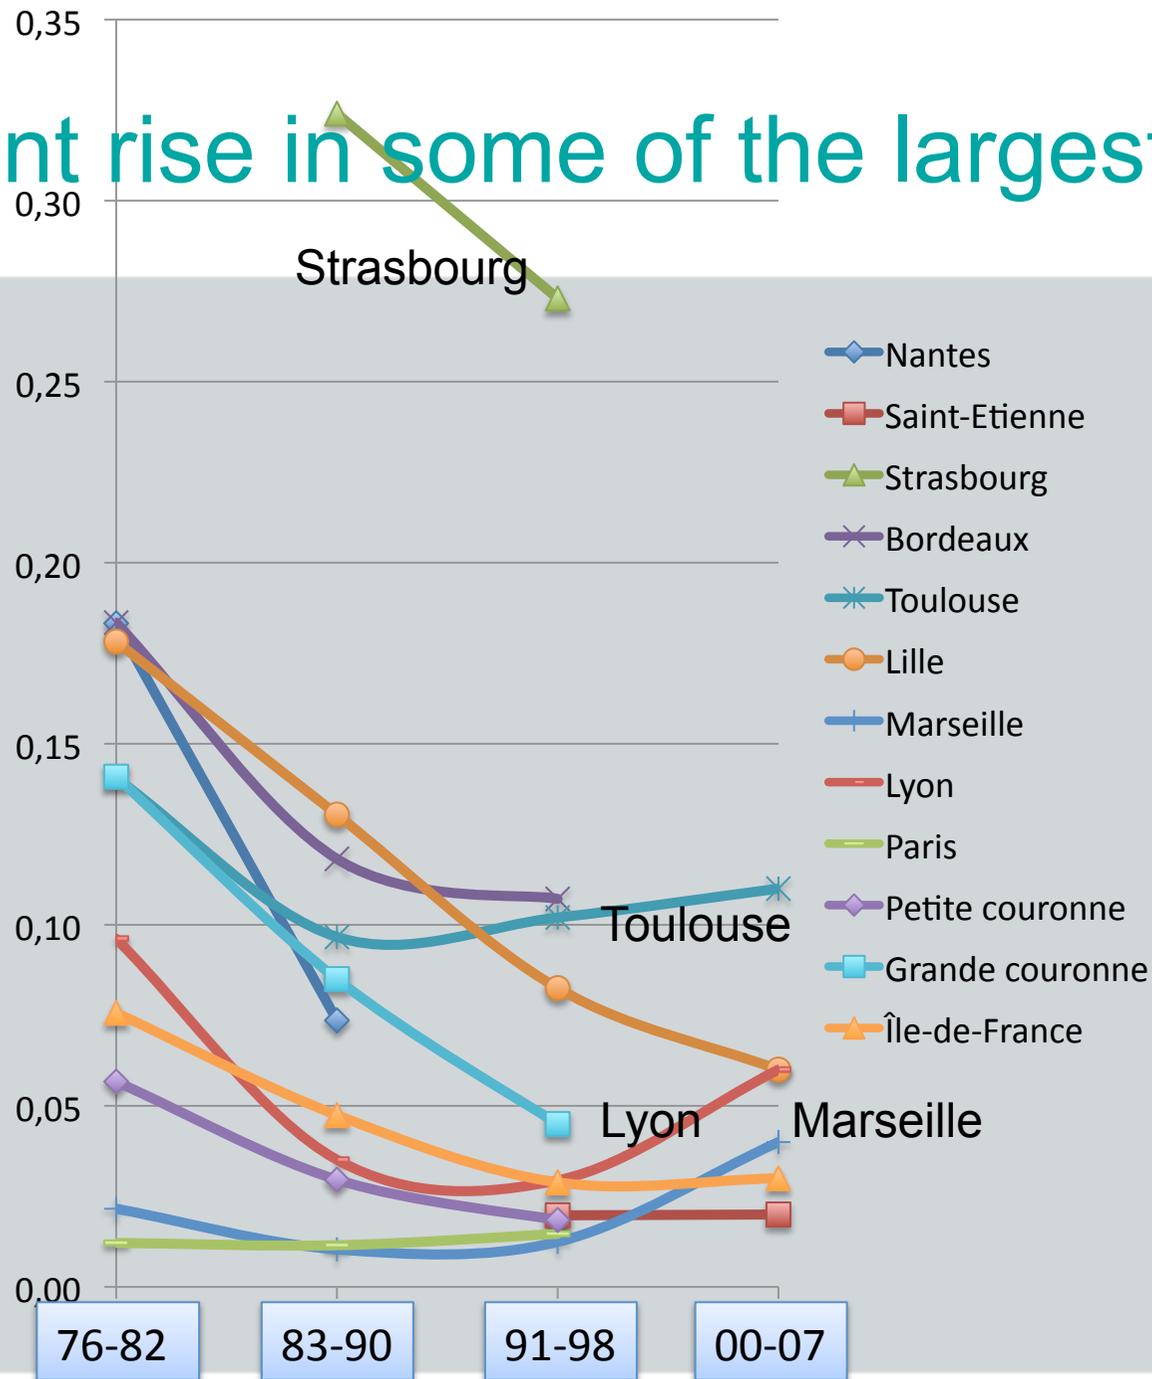

A general decline of bicycle trips

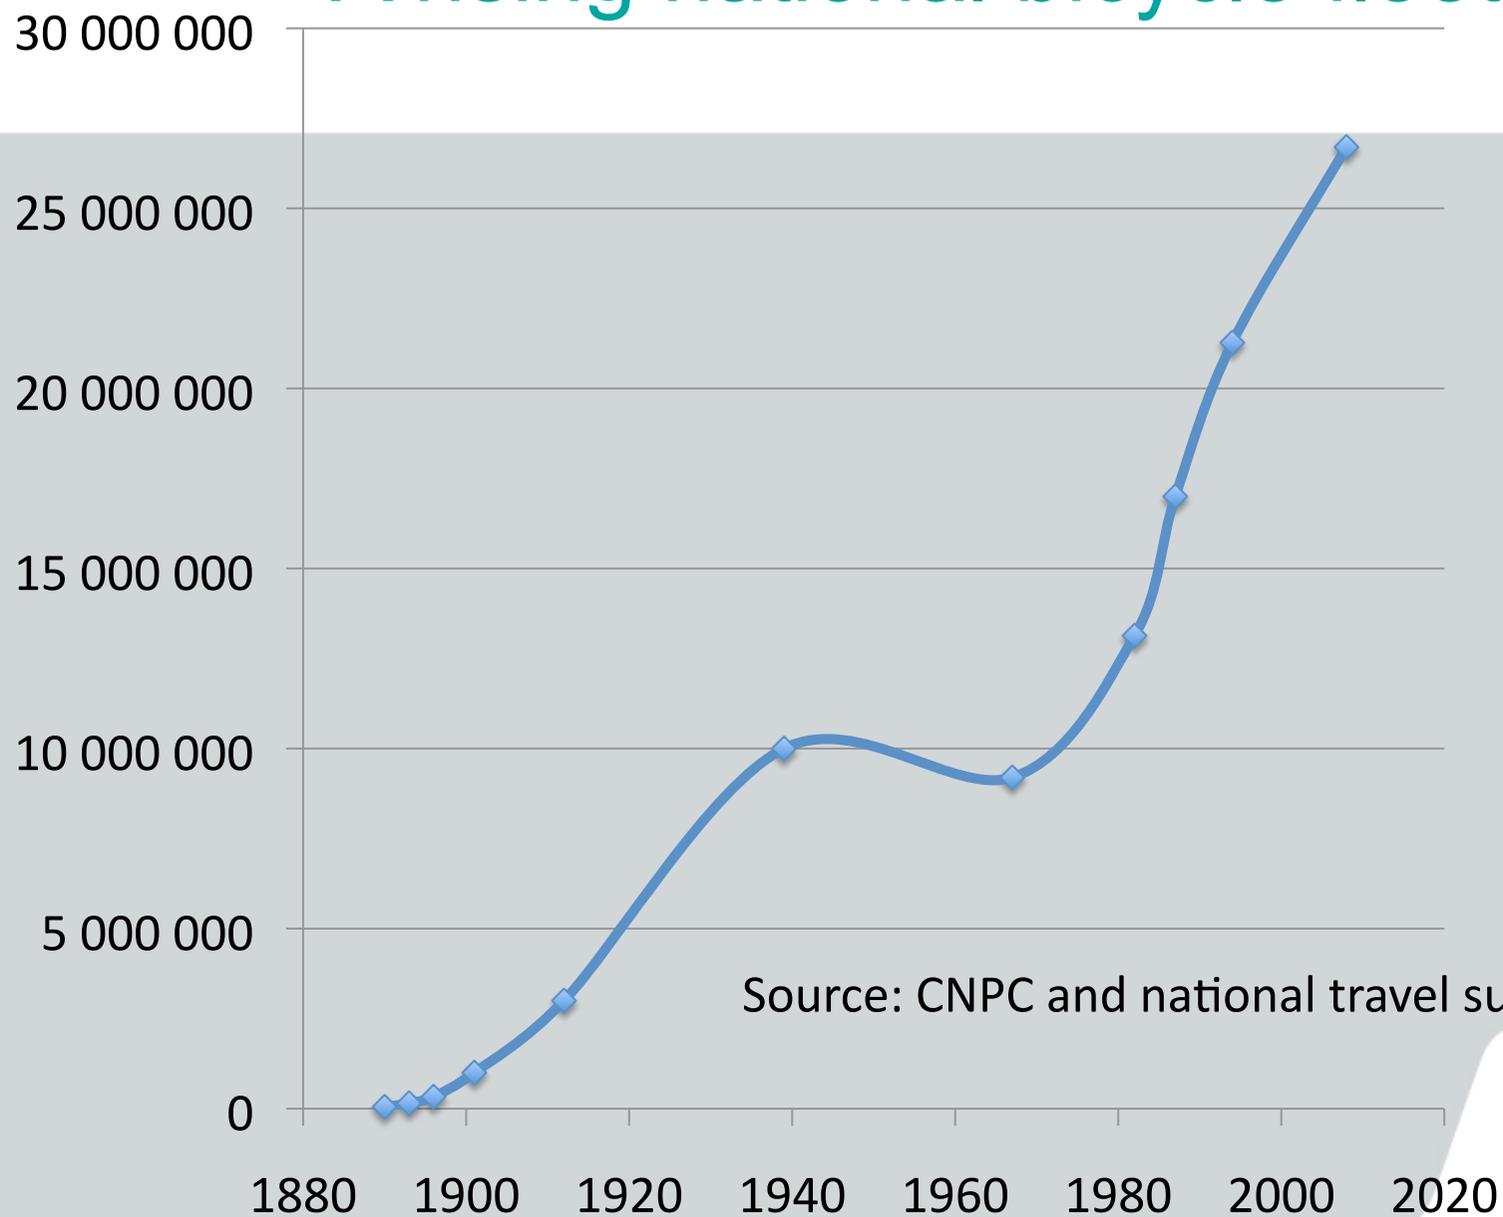

A recent rise in some of the largest cities

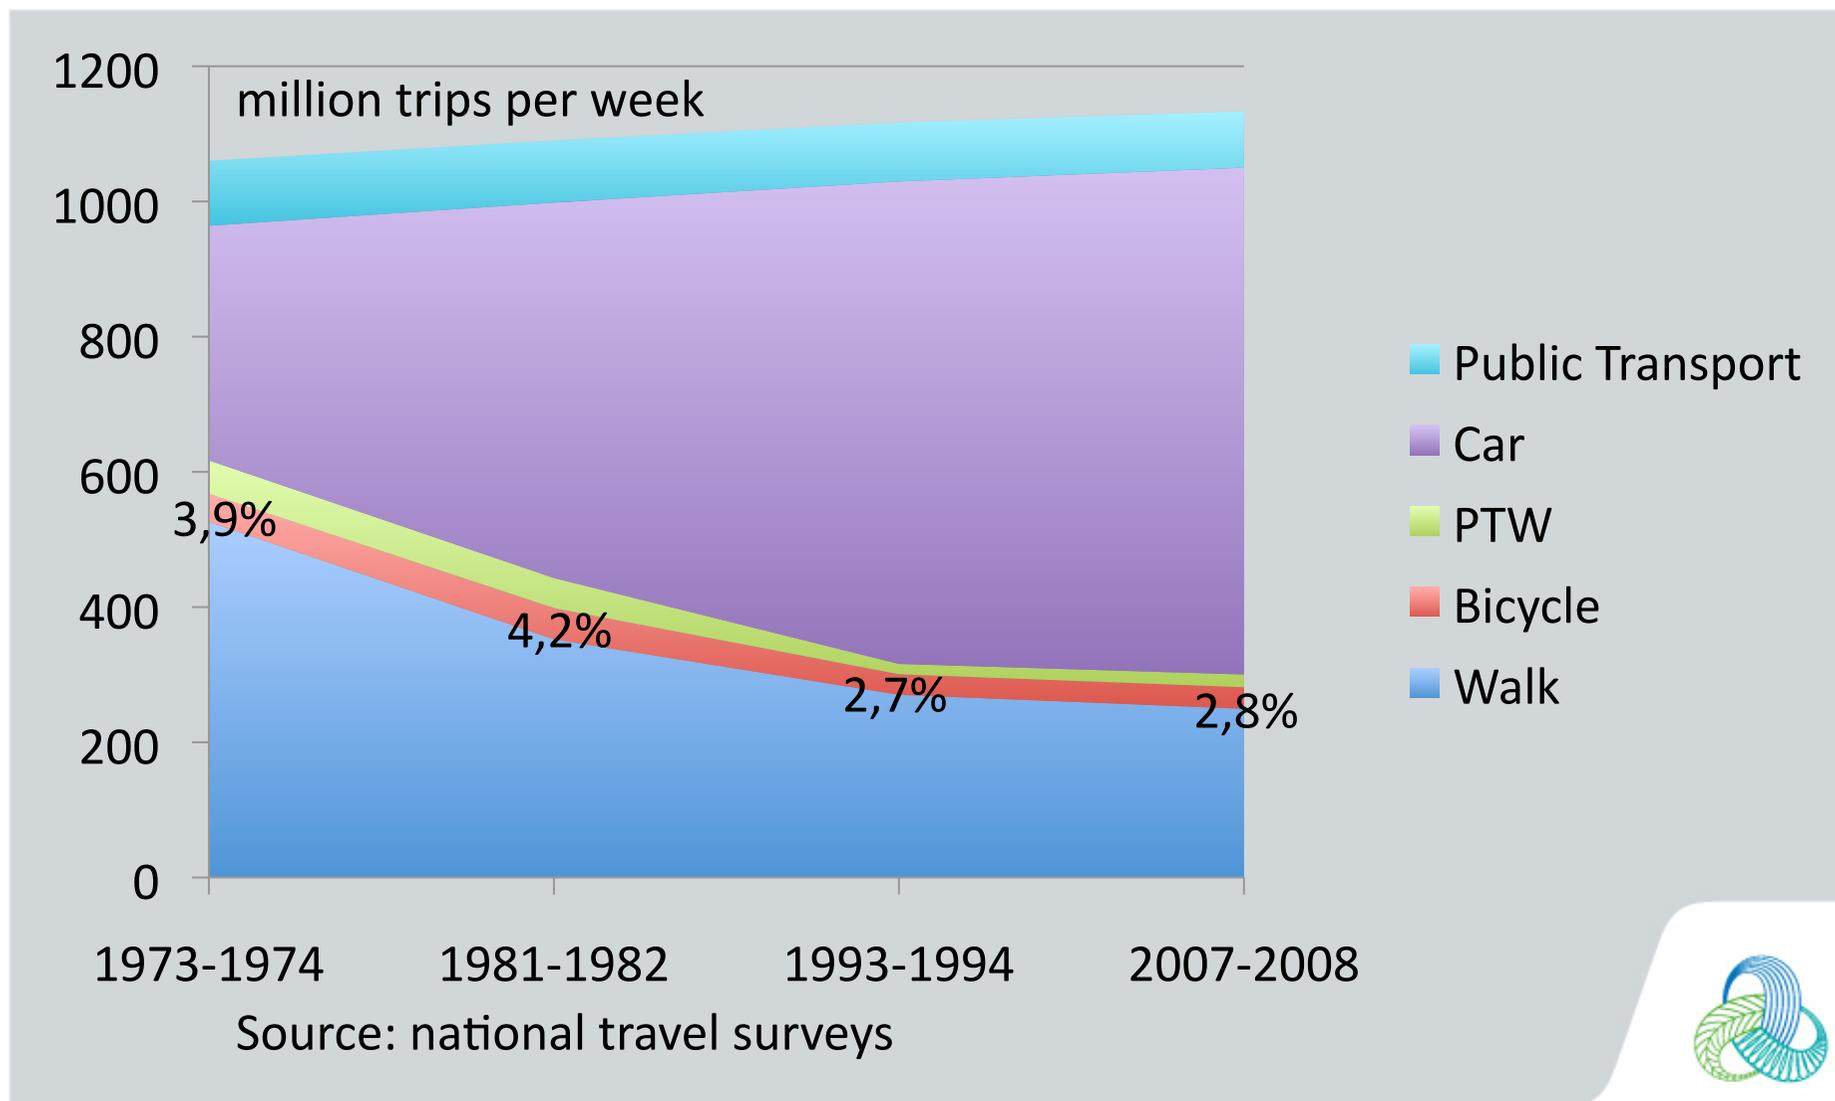

bicycle trips
per person
per day

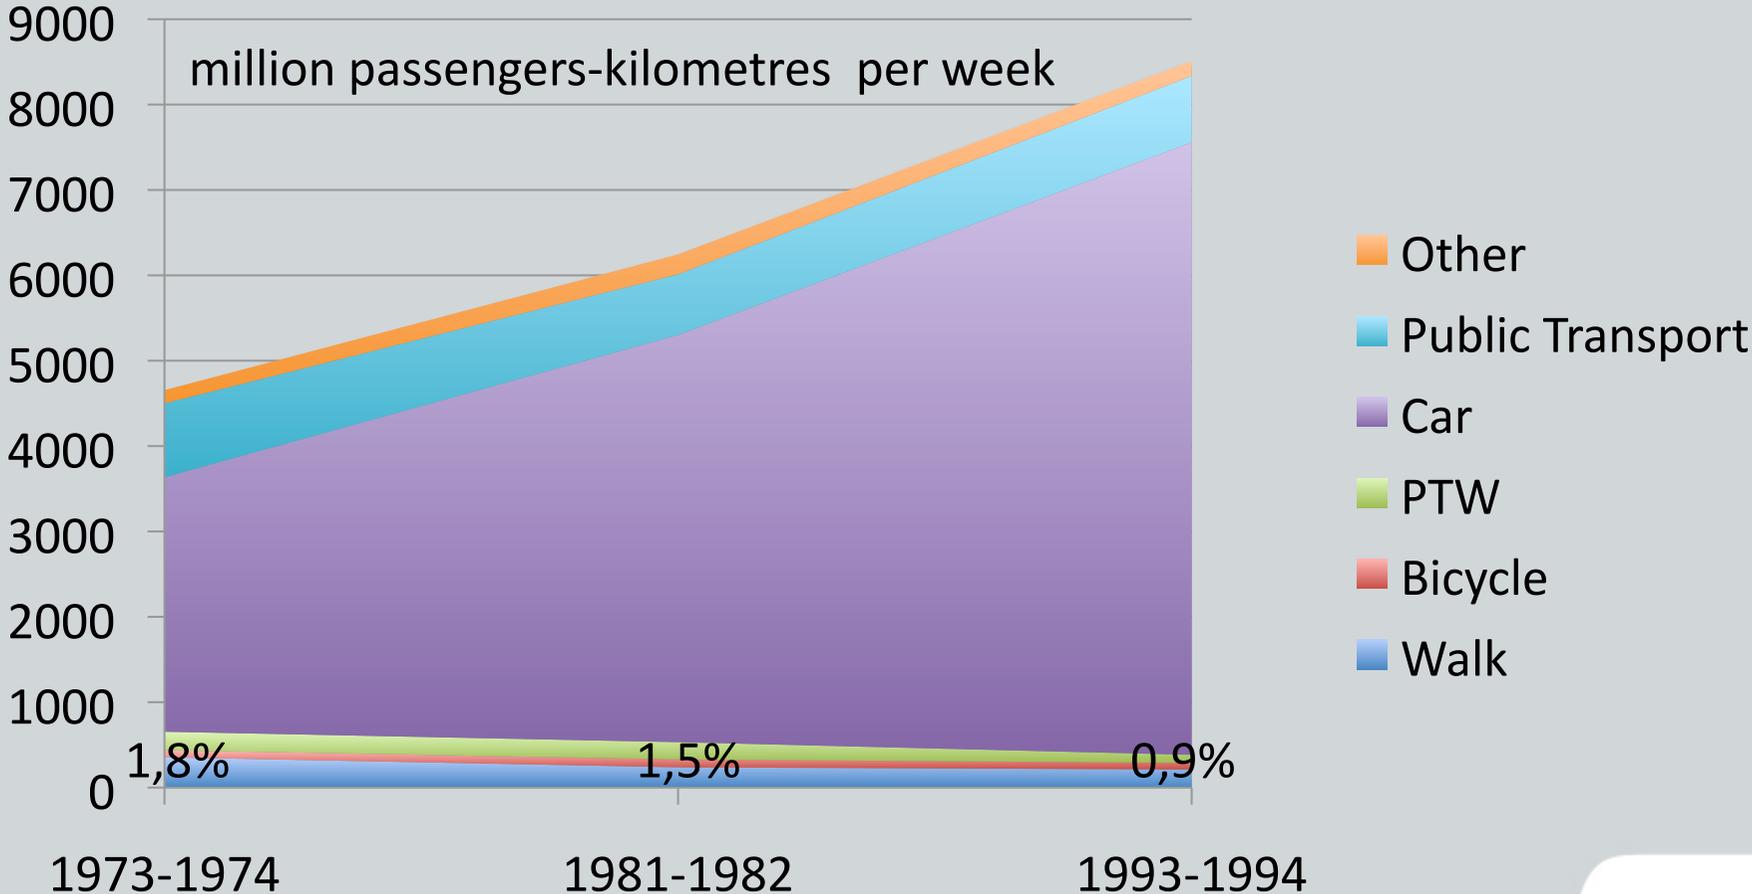

A rising national bicycle fleet

Bicycle narrow share of trips

Bicycle narrow share in mileage

French transport biographic survey

- Retrospective surveys use people's **memory**
- Other studies in France outside transport
- Transport biographies in UK, Switzerland, Germany
- In France biographic survey in NTS 2007-2008
- 1150 **grids** filled
- One **line** per year
- One **column** for each variable: dwelling place, household size, number of children, number of motorcycles, number of cars, main activity, activity place, main transport means
- Two **aims**: historical and longitudinal

Main home to work means share in Britain 1890-1998

1st visit

2nd visit

Between visits

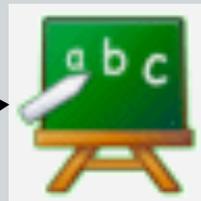

Comparability with historical cross section surveys (1)

Biases in biographic survey

Problem	Solution
---------	----------

- **Mobility definition:**
Only one main mode to a regular place (work or education), or other trips, per year

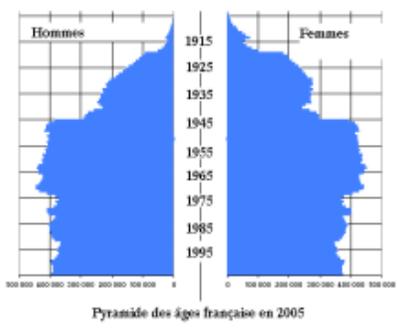

- Comparison of main transport mode for three groups
 - those commuting to work
 - those commuting to education
 - others

Comparability (2): Biases in biographic survey

Problems

Solution

- **Geography:** Only 17 regions were surveyed
- **Sampling:** Over-sampling of multi-car households
- **Structure:** The structure of the population from the biography sample differs from the actual structure that existed then

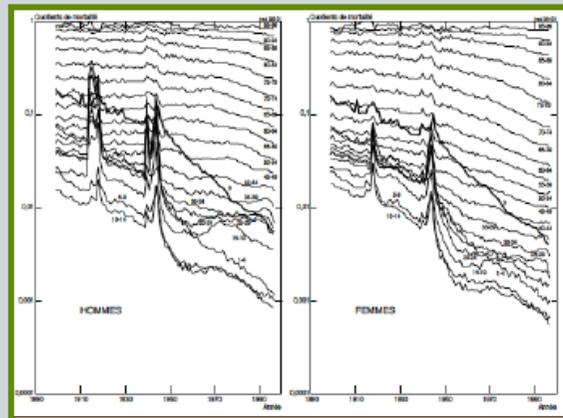

Weighting correction for recovery of the sample

Comparability (3): Biases in biographic survey

Problem

- **Survival:** Only survivors in 2008 from 1907 to 2002 generations were recorded

Solution

- Survival rate weighting
- Extrapolating backwards previous generations behavior

Comparison biographies vs cross section surveys

Biographies yield reliable modal share for regular trips

Estimation of an age-period model

- Different generalized **logistic model** tested
- To estimate **main means share**
- Many variables difficult to know in the past
- Low effect of generation, **high effect of period**
- **Age-period model** easiest model to estimate past modal share, taking into account past age groups share
- **Walk** is reference mode
- **Confidence intervals** computed for other modes
- **Bicycle share** highest in 1930's and 1940's
